

Smaller number

```
def find_smallest_number(list1):
    smallest_number = list1[0] # assume the first element is the smallest

    for number in list1:
        if number < smallest_number:
            smallest_number = number

    return smallest_number

# Example usage
list1 = [5, 7, 9, 14, 10, 20, 4]
print("Smallest number in list1 is:", find_smallest_number(list1))
```
